4.4 Carrier Presubscription

4.4.1 General

Carrier Presubscription is a procedure whereby a Customer designates to the Company the carrier that the Customer wishes to be the carrier of choice for intraLATA and interLATA toll calls. Such calls are automatically directed to the designated carrier, without the need to use carrier access codes or additional dialing to direct the call to the designated carrier. Presubscription does not prevent a Customer who has presubscribed to an IntraLATA or InterLATA toll carrier from using carrier access codes or additional dialing to direct calls to an alternative long distance carrier on a per call basis.

4.4 Carrier Presubscription, (Cont'd.)

4.4.3 Rules and Regulations

Customers of record will retain their primary interexchange carrier(s) until they request that their dialing arrangements be changed.

Customers of record or new Customers may select either Options A, B, C, D, E or F for intraLATA Presubscription.

Customers may change their selected Option and/or presubscribed toll carrier at any time subject to charges specified in 4.4.5 below:

4.4.4 Presubscription Procedures

A new Customer will be asked to select intraLATA and interLATA toll carriers at the time the Customer places an order to establish local exchange service with the Company. The Company will process the Customer's order for service. All new Customers' initial requests for intraLATA toll service presubscription shall be provided free of charge.

If a new Customer is unable to make selection at the time the new Customer places an order to establish local exchange service, the Company will read a random listing of all available intraLATA and interLATA carriers to aid the Customer in selection. If selection is still not possible, the Company will inform the Customer that he/she will be given 90 calendar days in which to inform the Company of his/her choice for primary toll carrier(s) free of charge. Until the Customer informs the Company of his/her choice of primary toll carrier, the Customer will not have access to long distance services on a presubscribed basis, but rather will be required to dial a carrier access code to route all toll calls to the carrier(s) of choice. Customers who inform the Company of a choice for toll carrier presubscription within the 90 day period will not be assessed a service charge for the initial Customer request.

Customers of record may initiate a intraLATA or interLATA presubscription change at any time, subject to the charges specified in 4.3.5 below. If a Customer of record inquires of the Company of the carriers available for toll presubscription, the Company will read a random listing of all available intraLATA carriers to aid the Customer in selection.

4.5 Public Telephone Surcharge

In order to recover Company expenses to comply with the FCC's pay telephone compensation plan effective on October 7, 1997 (FCC 97-371), an undiscountable per call charge is applicable to all intrastate calls that originate from any pay telephone used to access Company provided services. This surcharge, which is in addition to standard tariffed usage charges and any applicable service charges and surcharges associated with service, applies for the use of the instrument used to access Company provided service and is unrelated to the service accessed from the pay telephone.

Pay telephones include coin-operated and coinless phones owned by local telephone companies, independent companies and interexchange carriers. The Public Pay Telephone Surcharge applies to the initial completed call and any reoriginated call (e.g., using the "#" symbol). The Public Pay Telephone Surcharge does not apply to calls placed from pay telephones at which the Customer pays for service by inserting coins during the progress of the call.

Whenever possible, the Public Pay Telephone Surcharge will appear on the same invoice containing the usage charges for the surcharged call. In cases where proper pay telephone coding digits are not transmitted to the Company prior to completion of a call, the Public Pay Telephone Surcharge may be billed on a subsequent invoice after the Company has obtained information from a carrier that the originating station is an eligible pay telephone.

Station-to-Station Intercom Dialing is not available for Basic Centrex Lines and local usage rates apply for Intercom calls. Basic Centrex Lines are only available on a Month-to-Month basis.

6.4 Optional Features

- 6.4.1** Optional features are offered with each Centrex Service Plan in addition to the Standard Features shown in Section 6.3 preceding. Optional features are provided where facilities are available and consist of the following:
- 6.4.2 Call Waiting - Terminating** - Permits all incoming calls on lines already in use to be "announced" by a short burst of tone (audible only to the called party) and automatically completed upon termination of the in-progress call, or if the in-progress call is placed on Call Hold. This service can be provided for calls originating outside the system or for all calls. Tone Block allows a station user to temporarily deactivate Call Waiting prior to initiating a call or during a call in progress. The Call Waiting will be automatically reactivated when the call or call attempt is terminated.
- 6.4.3 Common Intercept** - Permits incoming exchange calls to unassigned and/or non-working lines to be intercepted by a standard announcement which informs the calling party that the called number is not in service. Intercommunication calls to unassigned station lines will be intercepted by a standard central office recorded announcement for system calls. This announcement will provide a common message that the number is not in service with advice that the in-house directory should be consulted.

SECTION 6 – CENTREX SERVICES AND RATES, (CONT'D.)

6.4 Optional Features, (Cont'd.)

6.4.4 Centrex Automatic Callback - Permits an originating Basic Centrex line user who attempts an intercommunication call to a busy Basic Centrex line to automatically be connected to that line when both called and calling lines become idle, by dialing an activation code. Automatic Callback Calling will only operate for intercommunication calls between lines of the same system. This feature can be canceled by the originating station user dialing a deactivation code.

6.4.5 Directed Call Pickup - Provides the ability for a call directed to a station line to be answered by any other station user by dialing a code number followed by the station line number. This feature offered with or without Barge-In as follows:

- A.** With Barge-In - If the call has already been answered, a burst of tone is applied to alert the answering party of the impending presence of a third party. The third party is then bridged into the existing connection.
- B.** Non-Barge In - If the call has already been answered, the station user who dialed the access code receives a busy tone.

6.4.6 Inside/Outside Ringing - Permits the station user to identify the source of incoming calls by a unique ringing pattern.

SECTION 11 – GRANDFATHERED SERVICES, (CONT'D.)

11.2 ISDN Primary Interface (PRI) Service

The Company's ISDN PRI is a competitive digital business telecommunications service offered to all customers located within Eastern Massachusetts LATA 128. ISDN PRI is a switched service that provides the end user with clear channel signaling (64 Kbs) in increments of 24 channels formatted within a T1 (1.544 MBPS) allowing such uses as carrying voice traffic, packetized data, or acting as common trunks. Company ISDN PRI end users will connect their CPE equipment to the Company's central office via T1 connections.

All Customer Provided Equipment (CPE) used with Company PRI is required to conform with the Bellcore Technical Reference Specifications as used by the Company: ISDN Primary Rate Access Transport System Requirements (a module of TSGR, FR-440), Issue Number 01; Technical Reference: tR-TSY-000754.

11.2.1 Standard Features for Circuit Switched Voice and Circuit Switched Data Services

A. Call by Call for Trunk Groups

Allows Circuit Switched Voice and Circuit Switched Data Services to enable over the Company's ISDN PRI trunk to share "B" channels and arrange them as a single trunk group.

This allows incoming and outgoing Circuit Switched Voice and Data calls to utilize "B" Channels on a call by call basis. (Without this capability, each service would require "B" channel.) "B" Channel Packet Switched Data Service cannot utilize this capability. ISDN PRI provides the end user with fractional T1 capabilities by using multiple B channels as required to support the request for aggregate bandwidth of each application thus using SS7 interconnection trunks between the Company and New England Bell Telephone. All of the twenty-three (23) channels twenty-four (24) where technology permits) are usable as stand alone trunk groups. Trunk groups can be equipped with Direct Inward Dial (DID) functionality.

11.2 ISDN Primary Interface (PRI) Service, (Cont'd.)

11.2.1 Standard Features for Circuit Switched Voice and Circuit Switched Data Services, (Cont'd.)

A. Caller ID Capability

All calling numbers presented to the services working on the ISDN PRI connection can be delivered to the Customer's CPE, including calls made to Direct Inward Dialing Service telephone numbers.

B. Clear Channel Capability

ISDN PRI uses a standard 23b +D channel format providing "B" channels solely used for customer applications, since all signaling and control functions are handled by the "D" channel. This allows up to 64 Kbps access on each "B" channel and multiple B channels can be configured together in order to satisfy bandwidth requirements required to pass customer information to distant end terminations where technically feasible via Company ISDN PRI connections. ISDN PRI also allows multiple T1s to be configured as a one user group using a single D channel for signaling support thus increasing available bandwidth.

C. Digital Voice Transmission

All voice calls are converted from an analog into a digital format to be transported across the network.

D. "D" Channel Control of Multiple Prime

Utilizes a single "D" channel to provide signaling and control for multiple ISDN PRI connections within a defined group. This allows the end user an additional bandwidth of 1.544 Mbps for each additional PRI port connection.

E. Equal Access Calling

Allows the customer to predefine an interexchange carrier or randomly access an interexchange carrier for each Trunk Group enabled.

Provides backup for a primary "D" channel under those circumstances where multiple ISDN Prime connections share a "D" single channel. A predetermined "D" channel on another RPI connection would automatically take over call control and signaling functions.

B. System Intercommunication Service

Allows Company ISDN PRI "B" channels to connect to a Centrex business system or another Company ISDN PRI that originates in the same central office. This feature is offered on a per trunk group basis only.

C. Call by Call for FX and Tie Lines

Allows Foreign District (FX) and Tie Line calls to be directed to and originated from ISDN PRI "B" channels. This provides Call by Call service selection for incoming and outgoing Circuit Switched and Private Facility services.

D. Network Ring Again

Enables station users whose Digital PBX is connected to a central office by ISDN Prime to complete calls to a busy station line in another system without redialing. The system may be in the same or a different central office.

E. Network Name Display

Allows the name of a station user calling over an ISDN PRI to be forwarded for display on a properly equipped customer-provided set. The terminating system may be in the same or a different central office.
