

The Sky is the Limit with Spectrotel SD-WAN

Not all SD-WAN solutions are the same...

Spectrotel works with multiple technology partners to offer a variety of options providing the optimal SD-WAN solution. Depending on your traffic patterns and network topology, we can tailor the perfect solution for your unique needs.

Some things to consider

- If access is needed to cloud applications, gateways are important.
- If data center resiliency and disaster recovery are key, a solution that can reroute the inbound IP addresses to a backup location is important.
- If resiliency of inbound Internet traffic to applications is important, public IP addresses at the gateways are critical.
- If traffic is from prem.-to-prem., a firewall based SD-WAN solution can be more cost effective.

Take control of your network's performance with the power and FLEXIBILITY of Spectrotel's SD-WAN solutions

Spectrotel's SD-WAN solution can be used over any existing customer network, or as a leading integrated solutions provider, Spectrotel can help you build a network solution. Spectrotel maximizes the value of low-cost Internet by utilizing any combination of the 250 supplier networks in our growing portfolio.

Benefits of Spectrotel's SD-WAN

- **No Restrictions** – Virtualize WANs across any network or access type.
- **Technology Options** – Design the ideal solution specific to your unique needs.
- **Tailor Fit** – Choose from managed and unmanaged options with flexible billing.
- **Aggregated Solution** – Combine disparate connections into one homogeneous network.
- **Agnostic Approach** – Bring together the best solutions regardless of underlying provider.

Increased Demand for Bandwidth

New applications, locations, or a growing number of users usually mean it's time to increase bandwidth, but SD-WAN gives you a powerful and scalable way to get more from the bandwidth and network you may already have.

The Business is Scaling

Enterprises run at a breakneck pace so they need technology that can fuel and enable their growth, not bring it to a grinding halt. SD-WAN lets you remain nimble by extending your WAN over any kind of existing connection, or lets you choose the solution with the quickest installation interval for fast, easy and cost effective scalability.

Network Performance is Suffering

Increased demand for real-time applications voice, video and collaboration tools require an optimized network that prioritizes that traffic. Spectrotel's SD-WAN gives you total control at the packet or flow level to ensure quality of service on any network.

Network Disruptions Happen

Circuits go down. That's the reality of managing a network. But business must go on, and that's the other reality of managing a network. SD-WAN gives you the ultimate in resiliency from the inherent self healing nature of the Internet backbone to the ability to actively manage redundant access links in a whole new way.

Benefits of SD-WAN

Holistic Network Visibility and Management

Get real-time portal access to the SD-WAN management console to observe and manage network Performance with quality metrics, bandwidth utilization by link, application demand, traffic sources and destinations.

Quick and Easy Network Expansion

Rapidly scale by making use of any Internet access technology from any provider either through Spectrotel's Internet over Anything (IOA) Service or existing Internet circuits to quickly add a location or capacity.

High Network Resiliency

No matter how hard network architects prepare, unplanned circuit outages occur. Our approach is to build in network resiliency with a redundant Internet connection and smart routing to achieve business continuity at each location.

Quality Network and Application Performance

Automatically route each packet over optimal routes based on the type of application it carries and the status of the network to maximize service performance and to route around network congestion or impairments.

Simplify complex WAN challenges with Spectrotel's SD-WAN
